About

Product Name:	Polyvinyl chloride, chlorinated
CAS#:	68648-82-8

Chlorinated polyvinyl chloride (ChlorinatedPolyvinylChloride; Ethene, chloro-, homopolymer, chlorinated; Chlorinated polyvinyl chloride resins, etc,) is a solid, light-colored thermoplastic with a melting point of 212?°C.

The thermoplastic is produced by chlorination of polyvinyl chloride (PVC) resin. Chlorinated polyvinyl chloride and polyvinyl chloride share similar features and properties. Still, chlorinated polyvinyl chloride is more ductile, which makes the product more flexure and crush resistant. The thermoplastic is highly corrosion resistant at high temperatures and shows fire-retardant properties.

Chlorinated polyvinyl chloride can be used in many processes. It is suitable for self-supporting constructions. Moreover, chlorinated polyvinyl chloride is used in the production of pipes, pumps, valves, strainers, filters, fume scrubbers, waste disposal devices, and automotive interior parts, among others.

Chlorinated polyvinyl chloride poses no specific side health effects on humans. However, the prolonged contact with the thermoplastic may cause coughing, inflammation and irritation of respiratory tract, eyes and skin.

Chlorinated polyvinyl chloride market is covered in the study Chlorinated Polyvinyl Chloride (CAS 68648-82-8) Market Research Report 2023. The report encompasses proper description of the product, unveils application areas, and briefly summarizes patents in the sphere. It overlooks chlorinated polyvinyl chloride market situation, names manufacturers, suppliers as well as users. The report also provides current chlorinated polyvinyl chloride prices.
