Snapshot

A heat gun offers instant, powerful, controlled heat that can be focused on an object, surface, or specific area. Safer than open flame, heat guns have largely replaced primitive means of applying intense heat. It is similar in appearance and construction to a hair dryer, but the air it emits is at a much higher temperature. Air is forced over the element and heated. Typically, the air emitted can reach temperatures between 200° and 1,000° Fahrenheit (93° to 537.7° Celsius).

The global Heat Guns market will reach xxx Million USD in 2018 and with a CAGR if xx% between 2019-2025.
