Biotechnology Media, Sera And Reagents Market Overview:

The global biotechnology media, sera and reagents market was valued at $18,794 million in 2017 and is estimated to reach at $32,974 million by 2025, registering a CAGR of 7.3% from 2018 to 2025.

Biotechnology is the branch of science that uses living organisms to make technological advancements and adapt those technologies to various different fields including agriculture, genetic engineering, novel drug developments, and several others. Media and sera find their application in animal tissue culture and plant tissue culture, while reagents are used in various biotechnology applications such as diagnosis, laboratory research, drug development, and others.

Considerable rise in the biotechnological R&D pertaining to the development of biopharmaceuticals has led to an increase in demand for culture media, sera, and reagents market. Moreover, increase in investments and funding for research interventions in both developed and developing countries further boost the market

growth. However, ethical & scientific concerns associated with the potential of misuse of biotechnology research practices and dearth of skilled personnel restrict the market growth. On the contrary, untapped potential of the emerging economies is anticipated to provide lucrative opportunities to the key players involved in the biotechnology media, sera and reagents market in the near future.

The biotechnology media, sera and reagents media market is segmented based on type, application, end user, and region. Based on type, the market is divided into media, sera and reagents. The media segment is further bifurcated into lysogeny broth, classical media, serum free media, chemically defined media, specialty media, stem cell media and others. The sera segment is further classified into fetal bovine sera, new born calf sera, and others. Likewise, the reagents segment is further segmented into antibiotics, DNA/RNS isolation reagents, PCR reagents, buffers and others. Based on application, the market is categorized into cancer research, biopharmaceuticals, clinical diagnostics, regenerative medicine & tissue engineering, and others. Based on end user, it is classified into biotechnology & pharmaceutical industry, academic institute, research laboratory, and others.
