Abstracts

A 3D CNC engraving machine is a computer numerically controlled device used for subtractive manufacturing processes that precisely carve, mill, or engrave three-dimensional designs into a variety of materials such as wood, plastics, metals, composites, and stone. It operates by interpreting digital CAD/CAM models to guide multi-axis cutting tools along programmed paths, enabling the creation of intricate reliefs, prototypes, molds, signage, artistic pieces, and functional components with high accuracy and repeatability. These machines are distinguished from 2D engravers by their ability to manipulate the Z-axis dynamically during operation, allowing for complex topographical surfaces and detailed depth variations that mimic sculptural forms.

The global 3D Cnc Engraving Machine market size was estimated at USD 380.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.30% during the forecast period.
