Abstracts

Air cooled cw fiber lasers are a type of continuous-wave solid-state laser where the fiber optic cable serves as the gain medium, generating a consistent beam of high-intensity light primarily for industrial applications such as cutting, welding, and marking metals and other materials; their cooling mechanism relies on ambient air or integrated fans rather than external chillers or liquid-based systems, offering advantages in terms of operational simplicity, reduced maintenance, lower initial costs, and energy efficiency, though they typically have lower maximum power outputs and may be less suitable for high-duty-cycle applications compared to water-cooled alternatives.

The global Air Cooled Cw Fiber Laser market size was estimated at USD 1200.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 9.50% during the forecast period.
