Abstracts

Aluminum metallized film is a specialized packaging material created by depositing a thin layer of aluminum onto a polymer substrate?typically polyester (PET), polypropylene (BOPP), or nylon?through a vacuum metallization process, which enhances properties such as moisture and oxygen barrier, light and UV resistance, heat reflectivity, and aesthetic appeal while using significantly less metal than traditional foil laminates. This material is widely used across industries including flexible packaging for food, snacks, pharmaceuticals, and electronics; insulation and decorative applications in construction; capacitors and wiring in electronics; and labels and gift wraps in consumer goods, valued for its combination of functionality, cost-efficiency, and sustainability.
