Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on BBQ Charcoal Briquette competitive dynamics, regional economic interdependencies, and supply chain reconfigurations.BBQ Charcoal Briquette refers to a compressed block of combustible material made primarily from charcoal fines, which are the small particles left over from charcoal production. These briquettes are commonly used as a fuel source for outdoor grilling and barbecuing due to their consistent shape, steady burn rate, and prolonged heat output. Charcoal briquettes are produced by combining charcoal powder with binders (such as starch or molasses) and other additives like limestone (for ash coloring), borax (for ease of release from molds), or accelerants (to aid ignition). Once mixed and compressed into uniform shapes—usually pillow or hexagonal—they are dried or baked to solidify. BBQ charcoal briquettes offer a controlled and clean-burning alternative to lump charcoal, making them popular for home and commercial barbecue use.

The global BBQ Charcoal Briquette market size was estimated at USD 1066.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.10% during the forecast period.
