Abstracts

Biodegradable ziplock bags are resealable plastic packaging solutions designed to decompose naturally through biological processes, primarily via the action of microorganisms under specific environmental conditions such as industrial composting facilities or soil environments, thereby reducing long-term plastic pollution compared to conventional petroleum-based ziplock bags; these bags are typically manufactured from bio-based polymers like polylactic acid (PLA), polyhydroxyalkanoates (PHA), or starch blends, or from fossil-based polymers enhanced with additives that accelerate fragmentation, though true biodegradability depends heavily on certification standards (e.g., ASTM D6400, EN 13432) to validate claims regarding compostability, breakdown timeframes, and non-toxic residue.

The global Biodegradable Ziplock Bag market size was estimated at USD 420.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 9.75% during the forecast period.
