Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Blocked Polyurethane Curing Agent For Coatings competitive dynamics, regional economic interdependencies, and supply chain reconfigurations.In 2024, global Blocked Polyurethane Curing Agent For Coatings production reached approximately 18,455 tons, with an average global market price of around US$ 13,590 per ton. Blocked polyurethane curing agents for coatings are a type of isocyanate curing agent that has undergone a "blocking treatment." At room temperature, the blocking agent temporarily protects the —NCO functional groups, preventing them from reacting with hydroxyl groups or other active hydrogen groups in the polyurethane system, thereby maintaining the stability of the coating system during storage and application. Only under certain heating conditions (typically 100–180°C) does the blocking agent dissociate, releasing the active —NCO groups that cross-link with the resin, forming a dense three-dimensional network. This property makes it ideal for high-performance coatings requiring high hardness, abrasion resistance, chemical resistance, and excellent adhesion.

The global Blocked Polyurethane Curing Agent For Coatings market size was estimated at USD 249.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 2.20% during the forecast period.
