## Abstracts

Cyber threat intelligence (CTI) refers to the collection, processing, and analysis of information about potential or current cyber threats, threat actors, and their tactics, techniques, and procedures (TTPs), enabling organizations to anticipate, prevent, and respond to cyberattacks in a proactive and informed manner. The global market for CTI is experiencing robust growth, driven by escalating cybercrime, increasing regulatory compliance requirements, and the growing sophistication of attacks targeting critical infrastructure, enterprises, and government entities. Key segments include finished intelligence, which provides actionable reports tailored to specific audiences, and indicator-based intelligence, which focuses on technical data such as IP addresses, hashes, and domain names. The market is characterized by a diverse vendor landscape, including specialized CTI providers, cybersecurity firms, and managed security service providers (MSSPs), with adoption highest in sectors like banking, healthcare, defense, and IT. Technological advancements, such as the integration of artificial intelligence and machine learning for automated threat detection and analysis, are further propelling market expansion, though challenges like data overload, the shortage of skilled analysts, and the need for real-time, contextualized intelligence remain significant hurdles for both providers and end-users.

The global Cyber Threat Intelligence market size was estimated at USD 10245.18 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 12.85% during the forecast period.
