Abstracts

A disposable cooler box is a single-use insulated container designed for temporary storage and transport of temperature-sensitive items, primarily perishable goods like food, beverages, or pharmaceuticals, typically made from lightweight materials such as expanded polystyrene (EPS), corrugated cardboard with insulating liners, or molded pulp. These products are intended for short-term use in contexts such as picnics, outdoor events, grocery deliveries, or emergency response situations where reusable coolers are impractical, offering convenience, hygiene, and portability while prioritizing thermal retention over durability. Unlike permanent coolers, disposable versions are often collapsible or flat-packed for efficient storage and distribution, and they may incorporate phase change materials or gel packs to extend cooling duration without the need for ice. Their design balances functionality with cost-effectiveness and environmental considerations, as many are marketed as recyclable or compostable to address waste concerns.

The global Disposable Cooler Box market size was estimated at USD 325.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
