Abstracts

Expanded Polystyrene (EPS) molded containers are lightweight, rigid packaging products formed from expanded polystyrene beads, which are steam-molded into specific shapes to provide cushioning, insulation, and protection for a wide range of goods, particularly in the food service industry for takeaway containers, egg cartons, meat and produce trays, and disposable cups, as well as in protective packaging for electronics, pharmaceuticals, and consumer goods. The market for EPS molded containers is driven by their cost-effectiveness, excellent thermal insulation properties, shock absorption capabilities, and versatility in design, though it faces growing pressure from environmental concerns regarding recyclability and bans on single-use plastics in various regions, prompting innovation in recycling technologies and the development of bio-based or alternative materials to meet sustainability demands while maintaining functional advantages.
