Abstracts

Feed enzyme preparations are defined as specialized additives comprising enzymes such as phytases, carbohydrases (e.g., xylanases and ?-glucanases), and proteases, which are incorporated into animal feed to enhance nutrient digestibility, improve feed efficiency, and reduce the environmental impact of animal production by decreasing the excretion of undigested compounds like phosphorus and nitrogen. These products function by breaking down anti-nutritional factors and complex substrates in feed ingredients, enabling better absorption of essential nutrients and supporting animal health and growth performance across various livestock species, including poultry, swine, and aquaculture.

The global Feed Enzyme Preparation market size was estimated at USD 491.68 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.15% during the forecast period.
