Abstracts

Magnetic sheet floaters, also known as floating magnetic sheets or magnetic levitation platforms, are thin, flexible sheets or platforms embedded with an array of small magnets that utilize magnetic repulsion to levitate lightweight objects, such as small decorations, promotional items, or visual displays, above their surface. These products typically consist of a base sheet containing neodymium or other permanent magnets arranged in a specific polarity pattern, which interacts with magnets embedded in or attached to the floating object to create a stable, contactless suspension effect. The technology relies on precise magnetic field alignment to counteract gravity, allowing objects to appear to float effortlessly in mid-air, and is often used for aesthetic, novelty, or attention-grabbing purposes in retail, exhibitions, or home decor.

The global Magnetic Sheet Floaters market size was estimated at USD 120.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
