Abstracts

A measuring light screen is an optoelectronic safety device used in industrial automation and manufacturing settings to detect the presence of objects or personnel within a defined area, typically for purposes such as access control, perimeter guarding, and ensuring operational safety around machinery. It consists of an array of synchronized infrared or laser beams projected between a transmitter and receiver; when any beam is interrupted, the system triggers a safety response?such as halting equipment?to prevent accidents. These devices are valued for their high precision, reliability, and ability to cover large or complex zones without physical barriers, making them critical components in compliance with occupational safety standards like ISO 13849 and machinery directives such as those from the EU.

The global Measuring Light Screen market size was estimated at USD 126.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.75% during the forecast period.
