Abstracts

A mobile DC charging pile, also known as a portable DC fast charger, is an electric vehicle (EV) charging device that provides high-power direct current (DC) charging, enabling rapid battery replenishment without requiring permanent installation or grid-tied infrastructure. Unlike stationary chargers, these units are designed for mobility, often mounted on trailers or integrated into mobile platforms, and are equipped with onboard energy storage systems (such as batteries) or generators to operate independently of fixed power sources. They serve as a flexible solution for temporary charging needs, emergency support, event-based EV infrastructure, or areas with underdeveloped grid access, offering compatibility with various EV models through standardized connectors like CCS, CHAdeMO, or GB/T.

The global Mobile Dc Charging Pile market size was estimated at USD 2575.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 25.50% during the forecast period.
