Report Overview

The mobile games IP (intellectual property) market refers to games developed or licensed based on existing franchises, characters, or brands from other media, such as films, TV shows, comics, novels, or even other video games. These games leverage established fan bases and recognizable assets to drive engagement, monetization, and retention, often through adaptations, spin-offs, or collaborations with well-known entertainment properties. Mobile games IP can be original (developed specifically for mobile platforms) or cross-platform (adapted from console or PC titles), and they typically monetize through in-app purchases, ads, or subscriptions. The value of mobile IP lies in its ability to attract players through familiarity while reducing marketing costs, though success depends on balancing brand authenticity with engaging gameplay mechanics tailored for mobile audiences. Licensing, co-development partnerships, and live-service models are key strategies in this space, with genres like RPGs, strategy, and casual games dominating the market due to their compatibility with IP-driven storytelling and monetization.

The global Mobile Games Ip market size was estimated at USD 361897.65 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 11.25% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Mobile Games Ip market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights. It examines market size, competitive landscape, emerging development trends, niche segments, key drivers and challenges, as well as conducts SWOT and value chain analyses.
