Abstracts

A multi-drug test cassette is a rapid diagnostic immunoassay device used for the qualitative detection of multiple drugs and their metabolites in human urine samples. These compact, single-use cassettes typically feature built-in test strips with specific antibodies that react to target substances, producing visual results?often via colored lines?within minutes. Designed for point-of-care or on-site testing, they commonly screen for a panel of drugs such as amphetamines, cocaine, opiates, cannabinoids, benzodiazepines, and barbiturates, providing a cost-effective, user-friendly solution for preliminary screening in settings like workplace testing, healthcare facilities, rehabilitation centers, and law enforcement. While not confirmatory without further laboratory analysis, they offer high specificity and sensitivity, making them a widely adopted tool for non-invasive, efficient drug testing.

The global Multi Drug Test Cassette market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
