Abstracts

Natural L-Ergothioneine (EGT) is a naturally occurring, sulfur-containing amino acid derivative primarily synthesized by select fungi, mycobacteria, and certain microorganisms, and is subsequently absorbed by humans and animals through dietary sources such as mushrooms, black beans, and certain grains. It functions as a potent antioxidant and cytoprotectant, uniquely transported into cells via a specific transporter (OCTN1) that accumulates it in tissues exposed to high oxidative stress, such as the liver, kidneys, and eyes, where it helps mitigate damage from reactive oxygen species, supports mitochondrial function, and exhibits anti-inflammatory properties. Recognized for its stability, bioavailability, and ability to protect cellular components from oxidative degradation, it is increasingly utilized in nutraceuticals, cosmetics, and pharmaceuticals aimed at promoting longevity, skin health, and overall cellular resilience.

The global Natural L Ergothioneine market size was estimated at USD 72.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.25% during the forecast period.
