Abstracts

Pediatric limb prostheses are custom-designed medical devices that replace missing limbs in children, engineered to address the unique physiological and developmental needs of growing users. These devices must accommodate rapid skeletal growth, changes in body proportions, and high activity levels, often incorporating adjustable components, lightweight materials, and advanced technologies like myoelectric or microprocessor-controlled joints for enhanced functionality. Designed not only to restore mobility but also to support psychosocial development, pediatric prostheses prioritize comfort, durability, and adaptability, with customization playing a critical role in ensuring proper fit and alignment as the child matures.
