Abstracts

Plastic packaging tubes refer to cylindrical containers, typically manufactured from polyethylene (PE), polypropylene (PP), or multi-layer co-extruded plastics, designed to store and dispense semi-solid or viscous products such as cosmetics, pharmaceuticals, food items, adhesives, and industrial compounds. These tubes are characterized by their durability, lightweight nature, barrier properties against moisture and oxygen, and versatility in design, including options for various closures, caps, and dispensing mechanisms. They are often preferred over traditional metal or laminate tubes for their cost-effectiveness, recyclability (in certain resin types), and adaptability to high-speed filling processes, making them a staple in both consumer and industrial packaging applications.

The global Plastic Packaging Tubes market size was estimated at USD 10850.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
