Abstracts

Polyetheramines and polyethers are specialized chemical compounds derived from ethylene oxide and/or propylene oxide, with polyetheramines specifically incorporating amine functional groups through amination processes. These versatile materials serve as key building blocks and intermediates across numerous industrial applications due to their tunable molecular weights, reactivity, and amphiphilic properties. Polyetheramines are particularly valued as curing agents in epoxy resin systems, offering flexibility, toughness, and improved chemical resistance, while also functioning as surfactants, fuel additives, and in agrochemical formulations. Polyethers, including polyether polyols, are fundamental in producing polyurethanes for flexible and rigid foams, elastomers, coatings, and adhesives, with additional uses as lubricants, hydraulic fluids, and pharmaceutical excipients. Both product categories are characterized by their adaptability to customized chain lengths and functionalization, enabling tailored performance characteristics to meet specific industrial requirements.

The global Polyetheramine And Polyether market size was estimated at USD 1210.45 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the forecast period.
