Abstracts

Portable airspeed indicators are compact, handheld instruments that measure and display the speed of an air current or airflow relative to the device itself, typically utilizing a pitot-static system or, in more modern iterations, digital sensors and transducers to detect dynamic pressure and convert it into a readable airspeed value, often presented in units such as knots, miles per hour, or meters per second. These devices are engineered for field use, featuring durability, battery operation, and often supplementary functions like data logging or connectivity to external devices, making them indispensable in applications ranging from aviation (for pre-flight checks, ultralight aircraft, or gliders) and aerodynamics testing to industrial settings such as HVAC system assessments, wind tunnel validations, or environmental monitoring where accurate, on-the-spot airflow measurement is critical.

The global Portable Airspeed Indicator market size was estimated at USD 45.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.38% during the forecast period.
