Semiconductor ALD (Atomic Layer Deposition) equipment refers to specialized manufacturing systems used in the semiconductor industry to deposit ultra-thin, highly uniform, and conformal films of materials?typically at the atomic scale?onto silicon wafers, enabling the production of advanced integrated circuits with nanoscale features. These systems operate through sequential, self-limiting surface reactions, allowing precise control over film thickness and composition, which is critical for fabricating complex device structures such as high-k gate dielectrics, metal electrodes, diffusion barriers, and three-dimensional architectures like FinFETs and 3D NAND memory. The equipment includes key components such as reaction chambers, precursor delivery systems, gas handling units, and process control interfaces, and it is designed to meet stringent requirements for purity, reproducibility, and scalability in high-volume semiconductor manufacturing environments.

The global Semiconductor Ald Equipment market size was estimated at USD 71942.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.
