Abstracts

Serum-free medium for cells refers to a specialized cell culture medium formulated to support the growth and maintenance of cells in vitro without the addition of animal-derived serum, such as fetal bovine serum (FBS). Unlike traditional serum-containing media, these products are chemically defined or partially defined, incorporating recombinant proteins, growth factors, hormones, lipids, and other essential nutrients in precise concentrations to mimic the beneficial properties of serum while eliminating its drawbacks, such as batch-to-batch variability, risk of contamination, and ethical concerns. Designed for use across various cell types?including mammalian, insect, and stem cells?serum-free media provide greater reproducibility, scalability, and safety, making them indispensable in biopharmaceutical production, regenerative medicine, toxicology testing, and basic biomedical research.

The global Serum Free Medium For Cells market size was estimated at USD 1250.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.75% during the forecast period.
