Abstracts

Structural heart occluders are implantable medical devices designed to repair structural heart defects, such as atrial septal defects (ASD), ventricular septal defects (VSD), and patent foramen ovale (PFO), by providing a mechanical barrier to close abnormal openings in the heart. These devices are typically delivered via minimally invasive catheter-based procedures, avoiding the need for open-heart surgery, and are engineered from biocompatible materials like nitinol and polyester to promote tissue ingrowth and long-term stability. The market for structural heart occluders is driven by the rising prevalence of congenital and acquired heart defects, advancements in transcatheter technologies, and growing patient preference for less invasive treatment options, with key players continually innovating to enhance device safety, efficacy, and ease of use.

The global Structural Heart Occluder market size was estimated at USD 2165.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 10.20% during the forecast period.
