Abstracts

Global Multistrain Probiotics Market is valued approximately USD XX million in 2021 and is anticipated to grow with a healthy growth rate of more than XX % over the forecast period 2022-2028. The Multistrain Probiotics also known as mixed probiotic or probiotic combinations are comprised of mixture of two or more bacteria species that are proven to offer several health benefits. The consumption of probiotic offers several health benefits such as intestinal health through regulation of microbiota, enhances the bioavailability of nutrients reduces risk of lactose intolerance and improves gut and immune system performance. Multistrain probiotics are also utilized in commercial animal production operations due to benefits such as gastrointestinal health, and promote growth and development of the animals. The increasing utilization of probiotics in animal feed and growing number of health-conscious individuals as well as strategic initiatives from leading market players are factors that are accelerating the global market demand. For instance, according to Statista – in 2019, the market value of probiotics in animal feed worldwide was estimated at USD 4.6 billion, and it is projected to grow to USD 7 billion by 2025. Furthermore, leading market players are venturing into multistrain probiotic range to capitalize the increasing demand for multistrain probiotics. For instance, in July 2019, Wakunaga announced expansion of its new line of multistrain probiotics. Under this new product line, the company would launch three new probiotic supplements. The new 3 strain product under brand name Kyo-Dophilus, a 9-strain product would be branded as Complete, and other 12 strain product would be branded as Max. Moreover, in June 2022, Alstonville, AU based Meluka Australia unveiled the first postbiotic tonic in the Australian market, named P3 Gut Builder. The new Triple Action Postbiotic Tonic formulated with Lactobacillus Rhamnosus Beebiotic

MAP01™ probiotic strain, plus seven multi strain probiotics. This new tonic is intended to improve gut health. Also, growing consumption of dietary supplements coupled with surge in per capita healthcare spending are anticipated to act as a catalyzing factor for the market demand during the forecast period. However, concern associated with functioning of multistrain probiotics as most of the strains present in the multistrain probiotics get dissolved in the stomach acid and high cost of multistrain probiotics are the factors which are likely to limit the growth of the market over the forecast period of 2022-2028.

The key regions considered for the global Multistrain Probiotics Market study include Asia Pacific, North America, Europe, Latin America, and the Rest of the World. North America is the leading region across the world in terms of market share owing to the growing number of health-conscious individuals and presence of leading market players in the region. Whereas, Asia Pacific is anticipated to exhibit a significant growth rate over the forecast period 2022-2028.
