Abstracts

A tension sensing roller is a specialized handheld device designed for therapeutic and self-myofascial release purposes, typically used in fitness, rehabilitation, and general wellness contexts. It incorporates embedded sensors that measure and provide real-time feedback on the amount of pressure being applied by the user during rolling exercises, often connecting to a mobile application or display unit to quantify force output, track consistency, and guide users toward optimal pressure levels for maximizing benefits while minimizing risk of tissue damage. This technology-enhanced roller aims to improve the precision, safety, and effectiveness of myofascial release techniques by helping users avoid under- or over-application of pressure, making it particularly valuable for athletes, physical therapists, and individuals managing chronic pain or recovery from injury.
