Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Tubing Conveyed Perforating System competitive dynamics, regional economic interdependencies, and supply chain reconfigurations.The Tubing-Conveyed Perforating System (TCP) is a perforating operation method that uses a tubing to lower a perforating gun into a well. It is widely used in deep wells, high-pressure wells, or complex well conditions where cable operations cannot be used. The system usually consists of a perforating gun, a firing head, a packer, etc., and triggers the detonation mechanically, pressure-wise, or electronically to achieve perforation of the oil and gas layer. Compared with traditional cable perforating, the TCP system can be carried out simultaneously with the completion operation, is safer, and has stronger adaptability. It is particularly suitable for difficult operating environments such as horizontal wells, multi-stage perforating, and pre-fracturing perforating.

The global Tubing Conveyed Perforating System market size was estimated at USD 3026.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 2.30% during the forecast period.
