Abstracts

Ultra - thin silage film is a kind of high - performance plastic film specifically designed for silage preservation. It is characterized by its extremely thin thickness, usually ranging from a few micrometers to tens of micrometers. Despite its thinness, it has excellent mechanical properties, such as high tensile strength and puncture resistance, which can effectively prevent the invasion of air, water vapor, and microorganisms. This film is made of special polymer materials, which have good flexibility and sealing performance. When used for silage, it can tightly wrap the forage, creating an anaerobic environment to promote the fermentation process and maintain the quality and nutritional value of the forage for a long time. Ultra - thin silage film is widely used in the livestock and forage industry due to its advantages of high efficiency, economy, and environmental protection.

The global Ultra-thin Silage Film market size was estimated at USD 235.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 1.70% during the forecast period.
