Abstracts

Wet laid non-woven fabrics are a specialized category of non-wovens produced through a papermaking process, where natural or synthetic fibers are suspended in water to form a slurry, then deposited onto a moving screen where water is drained to create a uniform web that is subsequently bonded using chemical, thermal, or mechanical methods. These fabrics are characterized by their high uniformity, controlled porosity, and excellent dimensional stability, making them suitable for applications requiring precise fiber distribution and consistent performance. They are widely used across diverse industries, including filtration (for air and liquid media), construction (as roofing and insulation substrates), medical (for surgical drapes and gowns), and specialty papers (such as tea bags and decorative laminates), owing to their versatility, absorbency, and strength properties tailored to specific end-use requirements.

The global Wet Laid Non Woven Fabrics market size was estimated at USD 10125.42 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.85% during the forecast period.
