A detailed picture of the Graves' Ophthalmopathy pipeline landscape is provided which includes the disease overview and Graves' Ophthalmopathy treatment guidelines. The assessment part of the report embraces, in depth Graves' Ophthalmopathy commercial assessment and clinical assessment of the pipeline products under development. In the report, detailed description of the drug is given which includes mechanism of action of the drug, clinical studies, NDA approvals (if any), and product development activities comprising the technology, Graves' Ophthalmopathy collaborations, licensing, mergers and acquisition, funding, designations and other product related details.

Graves' Ophthalmopathy Understanding

Graves' Ophthalmopathy also known as Graves' eye disease or Graves' Orbitopathy is a problem that usually develops in people with an overactive thyroid caused by Graves' disease. It is an autoimmune condition where the body's immune system produces an antibody to cells in the thyroid gland causing an overproduction of thyroid hormones. It appears that the same antibody that can cause thyroid dysfunction may also have an "attraction"" to tissues surrounding the eyes causing the onset of Graves' Ophthalmopathy. The disease is categorized as mild, moderate, and severe. Some common symptoms of Graves' Ophthalmopathy includes, feeling of irritation or grittiness in the eyes, redness or inflammation of the conjunctiva (the white part of the eyeball), excessive tearing or dry eyes, swelling of the eyelids, sensitivity to light, forward displacement or bulging of the eyes (called proptosis), and double vision. In more advanced eye disease there may also be decreased eye movement and eyelids, incomplete closure of the eye with corneal ulceration, compression of the optic nerve

and rarely, loss of vision.

Graves' Ophthalmopathy Pipeline Development Activities

The report provides insights into different therapeutic candidates in discovery and preclinical, phase 1, phase 2, and phase 3 stage. Drugs under development as a monotherapy or combination therapy are also included. It also analyses key players involved in Graves' Ophthalmopathy targeted therapeutics development with respective active and inactive (dormant or discontinued) projects with the appropriate reasons if available. Graves' Ophthalmopathy pipeline report covers 6+ companies. Some of the key players include HanAll Biopharma (HL 161), Horizon Therapeutics (Teprotumumab) etc.

The report is built using data and information traced from the researcher's proprietary databases, company/university websites, clinical trial registries, conferences, SEC filings, investor presentations and featured press releases from company/university web sites and industry-specific third party sources, etc.

Graves' Ophthalmopathy Analytical Perspective by DelveInsight

In-depth Graves' Ophthalmopathy Commercial Assessment of products

This report provides an in-depth Commercial Assessment of therapeutic drugs have been included which comprises of collaborations, Licensing, Acquisition –Deal Value Trends. The sub-segmentation is described in the report which includes Company-Company Collaborations (Licensing / Partnering), Company-Academia Collaborations, and Acquisition analysis in both Graphical and tabulated form.

Graves' Ophthalmopathy Clinical Assessment of products

The report comprises of comparative clinical assessment of products by development stage, product type, route of administration, molecule type, and MOA type across this indication.

Scope of the report

The Graves' Ophthalmopathy report provides an overview of therapeutic

pipeline activity for Graves' Ophthalmopathy across the complete product development cycle including all clinical and non-clinical stages

It comprises of detailed profiles of Graves' Ophthalmopathy therapeutic products with key coverage of developmental activities including technology, collaborations, licensing, mergers and acquisition, funding, designations and other product related details

Detailed Graves' Ophthalmopathy Research and Development progress and trial details, results wherever available, are also included in the pipeline study

Therapeutic assessment of the active pipeline products by development stage, product type, route of administration, molecule type, and MOA type

Coverage of dormant and discontinued pipeline projects along with the reasons if available across Graves' Ophthalmopathy

Reasons to Buy

Establish a comprehensive understanding of the current pipeline scenario across Graves' Ophthalmopathy to formulate effective R&D strategies

Assess challenges and opportunities that influence Graves' Ophthalmopathy R&D
