Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Phenethyl Acetate competitive dynamics, regional economic interdependencies, and supply chain reconfigurations.In 2024, global Phenethyl acetate production reached approximately 27 kilotons, with an average global market price of around US$ 12,200 per ton. Phenethyl acetate is an aromatic ester formed from phenethyl alcohol and acetic acid, widely known for its sweet, floral, and honey-like fragrance. It occurs naturally in various essential oils, such as rose and jasmine, and is commonly used as a flavoring agent in foods and beverages due to its fruity, slightly spicy taste. In the fragrance industry, it is valued as a key component in perfumes and cosmetics for its pleasant scent, while in flavor applications it enhances confectionery, baked goods, and beverages. Its dual role as both a natural compound and a synthetically produced additive makes it an important ingredient in the flavor and fragrance sectors.The key market driver for phenethyl acetate lies in its strong demand across the fragrance, flavor, and personal care industries, where its sweet, floral, and honey-like aroma makes it a valuable ingredient in perfumes, cosmetics, soaps, and detergents. Rising consumer preference for natural and pleasant-smelling products in daily use items is boosting its adoption, while its role as a flavoring agent in food and beverages?particularly in confectionery, baked goods, and alcoholic drinks?further expands its market potential. Additionally, growth in the global cosmetics and processed food industries, especially in emerging economies, is fueling demand, with increasing interest in natural or nature-identical compounds offering sustainable and cost-effective opportunities for manufacturers.

The global Phenethyl Acetate market size was estimated at USD 328.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the

forecast period.
