A sleeve coupler is a type of scaffolding connector used to join two scaffold tubes end-to-end in a straight line, ensuring structural alignment and stability. Made typically from galvanized steel, it consists of a cylindrical sleeve that fits over the ends of the tubes and is secured using bolts or clamping mechanisms. Sleeve couplers are essential in extending the length of scaffold tubes and are widely used in construction to support temporary structures and formwork due to their strong load-bearing capacity and resistance to corrosion.
