Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Wafer Inspection and Measurement Equipment for Aadvanced Packaging competitive dynamics, regional economic interdependencies, and supply chain reconfigurations.Wafer inspection and metrology equipment for advanced packaging refers to specialized equipment used in semiconductor wafer manufacturing processes to inspect, measure, and analyze wafer surface defects, critical dimensions, film thickness, overlay accuracy, surface morphology, and material properties. Its main purpose is to ensure the accuracy and stability of wafer manufacturing processes, improve yield, and provide process data support for R&D and advanced processes. This type of equipment includes optical and electron beam defect detection systems, critical dimension measuring instruments, film thickness measuring instruments, overlay accuracy measuring systems, and surface morphology analyzers, widely serving semiconductor wafer fabs, packaging plants, and R&D laboratories.In 2024, sales of wafer inspection and metrology equipment for advanced packaging were approximately 1,960 units, with an average unit price of approximately US$5.2 million. The industry's single-line capacity for complete systems was approximately 200 units per year, and the gross profit margin remained in the range of 50%–65%. The wafer inspection and metrology equipment industry chain in the advanced packaging field mainly consists of upstream core components and materials, midstream equipment manufacturing, and downstream advanced packaging companies. The upstream sector includes key components such as optical lenses, lasers, light sources, precision motion platforms, sensors, image processing chips, and algorithm software. These components have high technological barriers and determine the precision performance of the equipment. Midstream system manufacturers are

responsible for system integration, optical and electromechanical design, algorithm platform development, and optimization for matching specific processes. Downstream applications are widely used in wafer front-end processes (lithography, etching, thin film deposition, CMP, etc.) for defect detection, critical dimension measurement, film thickness and overlay accuracy control, as well as mask inspection and quality control in advanced packaging processes (2.5D/3D packaging, RDL, Micro-bump, WLP). With the continuous shrinking of process nodes and the increase in packaging complexity, the demand for inspection and measurement is growing strongly, becoming one of the most critical and certain-growth segments in semiconductor manufacturing.

The global Wafer Inspection and Measurement Equipment for Aadvanced Packaging market size was estimated at USD 10191.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
