Description:

CCM has finished a market report named Production, Market and Manufacturing Cost of Sugar Alcohols in China in Jun 2010. In order to meet clients' different demands and provide more low-price products, we separated it into many sub-reports with different specific themes. Production Technology of Sugar Alcohols in China is one of the sub-reports.

Currently, there are mainly two methods to produce sugar alcohols in China: traditional chemical method with glucose hydrotreating and biotechnological method through fermentation with corncob as raw material. Traditional method with glucose to be hydrotreated at the presence of catalyst to produce sugar alcohols can easily help realize industrial production of large scale. Bioproduction method is only used in xylitol, mannitol and erythritol's production, including microbial fermentation and enzyme process. Bioproduction is still immature for other sugar alcohols in China.
