Abstracts

Gear Spray Lubrication Systems are designed to deliver a precise amount of lubricant, usually oil or grease, in aerosol form to the gear teeth during operation. These systems use nozzles to spray the lubricant onto the meshing gear surfaces, ensuring an even coating to reduce wear, minimize friction, and dissipate heat. They are commonly employed in large, slow-moving open gears found in industries such as cement, mining, and power generation, where continuous and efficient lubrication is crucial for the gear's longevity and performance. This approach also reduces lubricant consumption and contamination compared to traditional lubrication methods.

The global Gear Spray Lubrication Systems market size was estimated at USD 128.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.10% during the forecast period.
