Abstracts

According to our (Global Info Research) latest study, the global Chiral Synthesis Service market size was valued at US$ 4623 million in 2024 and is forecast to a readjusted size of USD 8080 million by 2031 with a CAGR of 8.4% during review period.

Chiral synthesis service refers to a specialized service offered by chemical companies or research organizations that focuses on the production of chiral compounds. Chirality is a property of certain molecules that have a non-superimposable mirror image, similar to how our left and right hands are mirror images of each other. Chiral compounds are important in various fields, including pharmaceuticals, agrochemicals, and fine chemicals, as they often exhibit different biological activities or properties depending on their chirality.

Chiral synthesis service providers offer expertise and capabilities in synthesizing chiral compounds with high enantiomeric purity, meaning that they can produce compounds with a specific desired chirality. This involves the use of various techniques and methodologies, such as asymmetric synthesis, enzymatic resolution, or chiral chromatography, to selectively produce the desired enantiomer.

By outsourcing chiral synthesis to specialized service providers, companies or researchers can access the expertise and infrastructure required for the efficient and cost-effective production of chiral compounds. This allows them to focus on their core activities, such as drug discovery or chemical research, while ensuring access to high-quality chiral compounds for their applications.
