The global Calcaneal Locking Plate market size is expected to reach $ 654 million by 2032, rising at a market growth of 6.1% CAGR during the forecast period (2026-2032).

A calcaneal locking plate is an orthopedic implant used for internal fixation of calcaneal fractures. It provides stable angular support through locking screw technology, improving stress distribution and promoting fracture healing. These products are pre-designed according to the calcaneal anatomy, helping to restore foot alignment and function, and are widely used in trauma orthopedics and foot and ankle surgery. The calcaneal locking plate industry chain includes upstream medical-grade titanium alloys, stainless steel materials, and surface-treated raw materials. The midstream encompasses precision machining, molding, polishing, sterilization, and quality testing. Downstream applications include orthopedic hospitals, trauma centers, surgical clinics, and rehabilitation facilities. Supporting services include surgical training, technical support, device compatibility, and postoperative follow-up to ensure clinical efficacy and patient recovery quality. In 2025, the global production of calcaneal locking plates was approximately 2.33 million units, with a global average market price of approximately US$180 per unit. The gross profit margin of major companies in the industry is between 30% and 45%. In 2025, the global production capacity of calcaneal locking plates was approximately 3.11 million units.
