Abstracts

Fingerprint identification module cover refers to the external protective layer or panel covering the fingerprint identification module. It is an important component for realizing the fingerprint identification function. In the fingerprint identification module, the cover is tightly fitted with the fingerprint identification module, and the tight connection between the two is ensured by adhesive or other fixing methods. This fitting method helps to ensure that the fingerprint sensor is isolated from the external environment while providing a flat and easy-to-identify surface. The fingerprint identification module cover can be made of a variety of materials, such as sapphire, glass or ceramic. These materials usually have high strength, high hardness and good wear resistance to ensure stability and reliability for long-term use.

According to our (Global Info Research) latest study, the global Fingerprint Identification Module Cover market size was valued at US$ million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of %during review period.
