Abstracts

Distribution feeder automation is an integral part of system-level automation in contemporary power distribution networks, which improves reliability using self-healing, smart grid technology. The feeder establishes a connection between the substation and end-users without any tapping. Most of the faults occur on feeder lines as these are exposed to detrimental environmental conditions. Thus, utility companies are increasingly opting for feeder automation, which comprises an assembly of numerous smart relays and switching equipment.

Scope of the Report:

This report focuses on the Distribution Feeder Automation in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Owing to the frameworks of dynamic competitive environments, several businesses have realized the need for uninterrupted power supply without compromising on power quality. For instance, most of the manufacturing industries are now shifting toward Just in Time (JIT) delivery. An outage lasting even for a short duration creates a huge mismatch between supply and demand, thereby adversely affecting the overall revenue of the company. To overcome this challenge companies are using distribution feeder automation that reduces the outage time by quickly switching between feeder lines. The distribution feeder automation market appears to be competitive due to the presence of few players. The major players in this market are continuously trying to retain their market shares by increasing their operational efficiency and diversifying their offerings. To meet the evolving needs of industrial and commercial end-users, the market players are also focusing on providing a wide range of feeder protection

solutions.

EMEA will be the major revenue contributor to the market. This is mainly due to an increase in the number of development projects in the real estate sector and the growing number of data centers. Additionally, the increase in the adoption of IoT and supportive telecom infrastructure in Europe and the Middle East will also fuel the growth of the distribution feeder automation market in this region.

The worldwide market for Distribution Feeder Automation is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US$ in 2023, from xx million US$ in 2017, according to a new GIR (Global Info Research) study.
