Report Overview

Traditionally glass was the only preferred material for pharmaceutical bottles as its offers resistance to chemical contents for pharmaceutical products. But the fragile and heavy-weight characteristics of glass pose a challenge at the time of transporting the products leading to product damage, and ultimately affecting the revenue of the manufacturer. As an alternative solution, manufacturers of glass bottles substituted their raw material to plastic which is light weight and unbreakable, such as High-Density Polyethylene (HDPE), Polyethylene (PP) and other forms of plastic which are comparatively cheaper than glass.
