Abstracts

According to our (Global Info Research) latest study, the global Food Packaging Testers market size was valued at USD 38610 million in 2023 and is forecast to a readjusted size of USD 63900 million by 2030 with a CAGR of 7.5% during review period.

Food packaging testers are one of the essential components of the food industry. A food packaging tester determines the sustainability of a food package against chemical, physical, and environmental factors that can spoil food if it is not packed correctly.

The major driver for this market is rising awareness regarding the quality of food packaging materials designed to safely deliver food, avoid unacceptable changes in food ingredients due to migration, and keep the aroma or taste of the food intact. Moreover, rising consumer concerns about health hazards from chemical migration from packaging to food products and increasing regulation to comply with packaging testing requirements to regulate food safety is another major factor driving the market. However, high cost of advanced technology testing is expected to hamper market growth.
