Gaming cloud services, also known as cloud gaming or game streaming services, are platforms that enable gamers to play video games over the internet, streaming the game content from remote servers to their devices, rather than running the games locally on their own hardware. These services have gained popularity for their ability to provide high-quality gaming experiences on a variety of devices, including smartphones, tablets, smart TVs, and low-end computers, without the need for high-end gaming hardware.

Cloud gaming services continue to evolve, and their success depends on factors such as low latency, game library, pricing models, and the quality of the user experience. They have the potential to democratize gaming by making high-quality gaming accessible to a broader audience, including those without high-end gaming hardware.
