Abstracts

According to our (Global Info Research) latest study, the global Pentaerythritol Triacrylate (PETA) market size was valued at US$ 59.27 million in 2025 and is forecast to a readjusted size of US$ 78.28 million by 2032 with a CAGR of 4.1% during review period.

Pentaerythritol Triacrylate (PETA) is a multifunctional acrylate monomer that exists as a colorless or slightly yellow transparent liquid. PETA is characterized by rapid curing, high crosslinking density, and high hardness, and is primarily used as a crosslinking agent in free radical polymerization.The upstream of the industry chain mainly includes the supply of raw materials such as acrylic acid, pentaerythritol, catalysts, and organic solvents. Acrylic acid, obtained by the oxidation of propylene, is a key raw material with a relatively high cost. Downstream applications are wide-ranging, mainly concentrated in high-performance photocurable systems such as UV-curable coatings, inks, adhesives, and 3D printing resins.

Global sales volume in 2024 was approximately 12,000 tons, with an average market price of approximately US$4,500 per ton. The scale of single-line production capacity varies depending on the production process and investment scale of production equipment, typically ranging from 300 to 1,000 tons per year, with industry gross profit margins ranging from 12% to 28%.

The pentaerythritol triacrylate (PETA) industry is showing steady growth overall, benefiting from the rapid expansion of emerging applications such as UV-curable coatings, inks, electronic packaging materials, and 3D printing resins. As a high-functionality acrylate monomer, PETA possesses high reactivity, excellent adhesion,

and abrasion resistance, making it an important material in UV-curing systems for improving crosslinking density and performance. However, PETA production is constrained by factors such as fluctuations in acrylic acid prices, the stability of the supply of raw material pentaerythritol, and stringent safety production requirements, resulting in a high degree of industry concentration.
