## Abstracts

According to our (Global Info Research) latest study, the global Ion-Exchange Chromatography market size was valued at USD 454.5 million in 2023 and is forecast to a readjusted size of USD 557.7 million by 2030 with a CAGR of 3.0% during review period.

Ion exchange chromatography involves the separation of ionizable molecules based on their total charge. This technique enables the separation of similar types of molecules that would be difficult to separate by other techniques because the charge carried by the molecule of interest can be readily manipulated by changing buffer pH.

Clinical application of ion chromatography is in the rapid anion exchange chromatography technique used to separate creatine kinase (CK) isoenzymes from human serum and tissue sourced in autopsy material (mostly CK rich tissues were used such as cardiac muscle and brain). There has also been a growing interest in the application of IC in the analysis of pharmaceutical drugs. IC is used in different aspects of product development and quality control testing. In Industry sector, it also has lots of applications.

The Global Info Research report includes an overview of the development of the Ion-Exchange Chromatography industry chain, the market status of Pharmaceutical (Reagents, Instruments), Healthcare (Reagents, Instruments), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Ion-Exchange Chromatography.
