Abstracts

According to our (Global Info Research) latest study, the global Pharmacy Compounding Mortar and Pestle market size was valued at US$ million in 2025 and is forecast to a readjusted size of US$ million by 2032 with a CAGR of %during review period.

In 2025, global sales of pharmacy compounding mortar and pestle products reached approximately 250 Thousand Sets, with an average manufacturer selling price of about US$35.6 per Set. A pharmacy compounding mortar and pestle is a manual, non-powered preparation tool consisting of a bowl-shaped mortar and a matching rod-shaped pestle, typically manufactured from porcelain, glass, alumina ceramic, agate, stainless steel, or chemically resistant polymers. Rough or smooth working surfaces provide different levels of friction for trituration, particle-size reduction, blending, levigation, and homogenization of drug substances, excipients, and solid dosage forms. The product supports uniform and flexible small-batch pharmaceutical preparation and is primarily used in hospital pharmacies, pharmacy departments, compounding pharmacies, institutional preparation rooms, veterinary compounding, and pharmacy education.

Market growth is primarily driven by the continued demand for personalized medicines, pediatric and geriatric formulations, veterinary compounding, and small-batch preparations that are not adequately served by standardized commercial dosage forms. Stricter requirements for contamination control and dedicated compounding tools encourage pharmacies and hospitals to maintain multiple mortar and pestle sets for different drug categories. Replacement demand arising from wear, breakage, surface deterioration, and cleaning requirements also supports stable sales. In addition, the

expansion of pharmacy education and healthcare infrastructure in emerging markets creates incremental demand, although wider adoption of electronic mortars and automated mixing systems limits overall volume growth.
