Abstracts

The global Polyimide Photoresist Film market size is expected to reach $ 381 million by 2032, rising at a market growth of 6.2% CAGR during the forecast period (2026-2032).

Polyimide photoresist film usually refers to a film like functional material with polyimide or polyimide precursor as the main resin and photosensitive patterning ability. It is not a traditional photoresist used for front-end wafer exposure, but is more commonly used in semiconductor back-end packaging, advanced packaging, RDL rewiring layers, protective films, buffer layers, insulation layers, packaging substrate insulation layers, and FPC optical imaging cover films. In 2025, global Polyimide Photoresist Film production reached approximately 562 MT, with an average global market price of around US$ 432 per kg.The annual production capacity of polyimide photoresist film is 800 tons, with a gross profit margin of about 30%.

The upstream mainly includes aromatic dianhydride, aromatic diamine, polyimide precursor resin, photosensitive monomer, photoinitiator, crosslinking agent, solvent, development adapter, leveling agent, tackifier, release film, protective film, PET or PI base film, clean packaging materials, etc. The manufacturing process includes resin synthesis, photosensitive formula development, precision coating, drying and pre drying, bonding and composite, thickness control, clean cutting, particle control, metal ion control, exposure and development performance testing, and reliability verification.

The downstream mainly includes advanced packaging factories, wafer level packaging factories, panel level packaging factories, packaging substrate factories, semiconductor IDM enterprises, OSAT packaging and testing factories, FPC manufacturers, high-performance computing chip packaging enterprises, AI chip packaging enterprises, power semiconductor packaging enterprises, and consumer electronics flexible circuit

board factories. Typical applications include RDL rewiring layer insulation, wafer protection film, buffer layer, passivation layer, packaging substrate insulation layer, FPC optical imaging cover film, multi-layer packaging dielectric layer, and temporary protection layer.

Polyimide resin and precursors account for about 25% to 38%, photosensitive systems and functional additives account for about 12% to 22%, solvents, release films, protective films, and base films account for about 10% to 18%, precision coating, drying, bonding, and cutting processes account for about 10% to 16%, clean rooms, particle control, and metal ion control constraints account for 5% to 10%, testing validation and reliability testing account for about 6% to 12%, labor, energy, and equipment depreciation account for about 6% to 10%, packaging, storage, and transportation account for about 2% to 5%, and yield loss accounts for about 3% to 8%.

Polyimide photoresist film is in an emerging sub field formed by the intersection of photosensitive polyimide materials and dry film photoresist materials, and its core opportunity comes from the evolution of advanced packaging from wafer level to panel level, large-area, multi-layer RDL, and high I/O density direction. The future market growth focus will not only depend on the materials themselves, but also on their overall adaptability to film equipment, exposure and development processes, copper interconnects, RDL multilayer structures, warpage control, low stress curing, and reliability testing. With the development of AI chips Chiplet?HBM? The demand for thinner, more reliable, and more easily patterned insulation materials in high-performance computing, automotive power devices, and advanced packaging substrates is increasing. Polyimide photoresist films are expected to move from small batch high-end verification to more extensive advanced packaging mass production applications. However, in the short term, they will still be affected by long customer certification cycles, high material costs, concentrated suppliers, strict process window requirements, and competition with liquid PSPI, PBO, and other photosensitive dielectric materials.

This report studies the global Polyimide Photoresist Film production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Polyimide Photoresist Film and provides market size (US$ million) and Year-over-Year (YoY) Growth, considering 2025 as the base year. This report explores demand trends and competition, as well as details the characteristics of Polyimide Photoresist Film that contribute to its increasing demand across many markets.

Highlights and key features of the study
Global Polyimide Photoresist Film total production and demand, 2021-2032, (Tons)
Global Polyimide Photoresist Film total production value, 2021-2032, (USD Million)
Global Polyimide Photoresist Film production by region & country, production, value, CAGR, 2021-2032, (USD Million) & (Tons), (based on production site)
Global Polyimide Photoresist Film consumption by region & country, CAGR, 2021-2032 & (Tons)
U.S. VS China: Polyimide Photoresist Film domestic production, consumption, key domestic manufacturers and share
Global Polyimide Photoresist Film production by manufacturer, production, price, value and market share 2021-2026, (USD Million) & (Tons)
Global Polyimide Photoresist Film production by Type, production, value, CAGR, 2021-2032, (USD Million) & (Tons)
Global Polyimide Photoresist Film production by Application, production, value, CAGR, 2021-2032, (USD Million) & (Tons)

This report profiles key players in the global Polyimide Photoresist Film market based on the following parameters - company overview, production, value, price, gross margin, product portfolio, geographical presence, and key developments. Key companies covered as a part of this study include TORAY INDUSTRIES, Asahi Kasei, Eternal Materials, Pome Technology, MINSEOA Advanced Materials, etc.

This report also provides key insights about market drivers, restraints, opportunities, new product launches or approvals.

Stakeholders would have ease in decision-making through various strategy matrices used in analyzing the World Polyimide Photoresist Film market

Detailed Segmentation:

Each section contains quantitative market data including market by value (US$ Millions), volume (production, consumption) & (Tons) and average price (US$/Kg) by manufacturer, by Type, and by Application. Data is given for the years 2021-2032 by year with 2025 as the base year, 2026 as the estimate year, and 2027-2032 as the forecast year.
