Specialty papers for the tobacco industry are functional paper materials specifically designed for the manufacture, packaging, filtration, and appearance enhancement of cigarettes and other tobacco products. The category mainly includes cigarette paper, tipping base paper and printed tipping paper, plug wrap paper, inner liner paper, tobacco sheet base paper, and other specialty wrapping or packaging papers. These products must meet specific requirements for basis weight, porosity, tensile strength, opacity, printability, dimensional stability, heat resistance, odor neutrality, and food-contact or tobacco-industry compliance. Depending on the application, the paper may also be engineered to control burning speed, ash formation, ventilation, filtration performance, moisture protection, and product appearance.

The upstream supply chain mainly consists of wood pulp, flax or other specialty fibers, calcium carbonate and other mineral fillers, combustion regulators such as citrate salts, wet-strength and sizing agents, coatings, printing inks, adhesives, aluminum foil, and paper-converting equipment. Paper manufacturers process these materials through pulping, papermaking, coating, slitting, perforating, embossing, printing, and laminating. Downstream customers include cigarette manufacturers, filter and tipping-paper converters, tobacco packaging companies, cigar and cigarillo producers, roll-your-own tobacco suppliers, and heated-tobacco product manufacturers. The papers are used for wrapping tobacco rods, connecting filters to cigarette rods, wrapping filter plugs,
