According to our (Global Info Research) latest study, the global System on Chip (SoC) market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

System-on-chip (SoC) refers to an integrated circuit on which various electronic components are combined such as transistors, memory units, control units, peripherals, and others, depending on the type of application. It includes both hardware and software that result in better response time with efficient power consumption. SoC is an effective way to increase the performance of the device and helps to meet the increasing computational demand.

The mounting use of smart devices such as laptops and smartphones across the globe in the past few years has provided a huge thrust to the global SoC market. Moreover, the development of technologically advanced SoCs that house more features within a specified area, leading to better resistivity of wires and higher interconnectivity, is further driving the global SoC market. Application of these functions has resulted in the declining cost per function of integrated circuits (ICs).
